Abstract

Keywords

1. Introduction
 The purpose of this study is to investigate the effects of the proposed method on the performance of the system. The results show that the proposed method significantly improves the performance of the system compared to the baseline method.

2. Methodology
 The proposed method consists of two main steps: data collection and data analysis. In the data collection step, we collect data from the system and analyze it to identify the performance metrics. In the data analysis step, we use statistical methods to analyze the data and determine the significance of the results.
